

AXIS® eRisk Hub®

A Highly Specialized Web Portal to Help Prevent, Report and Recover Cyber Losses

How prepared are you?

Network attacks and privacy violations are occurring with increasing frequency. Even with strong security and privacy controls in place, companies can be victimized by internal fraud, business interruption, damage to data, theft of data or cyber extortion.

Once an incident occurs, immediate help and expertise may be needed to respond and recover. Because incidents can be very complex, assistance across a broad range of disciplines should be considered including legal/regulatory compliance, information technology (IT) security, privacy, disaster recovery/business continuity, computer forensics, public relations, credit monitoring and law enforcement.

The AXIS® eRisk Hub® is a safety net that complements and bolsters your existing incident response and business continuity plans. An Internet-based service, the portal provides network security and specialized e-risk management resources including news and content from providers of cyber risk services.

Key Features of the AXIS® eRisk Hub®

Breach Coach™

Our Breach Coach service, staffed by attorneys who are certified privacy professionals, provides immediate triage assistance in the event of a breach.

News Center

The News Center keeps you up to date with cyber risk events, security and compliance blogs, security news, risk management solutions, and helpful industry links.

Learning Center

The Learning Center contains best-practices articles and white papers written by leading technical and legal professionals on compliance, network security, privacy and breach recovery.

eRisk Resources Directory

From security consultants, to PCI and FACTA experts, to forensic investigators, to e-discovery specialists, the eRisk Resources Directory helps you quickly find external resources with deep expertise in pre- and post-breach disciplines.

How the AXIS® eRisk Hub® Helps

Prevention

- Learn best practices in cyber risk management
- Monitor breach activity and trends through email alerts and news services
- Obtain an objective assessment of security & privacy readiness
- Get a network vulnerability scan
- Obtain help in developing or refining a privacy policy
- Download risk management forms & documents
- Create a crisis communications plan

Recovery

- Call the Breach Coach
- Find attorneys experienced in breach notification, e-discovery, and regulatory compliance
- Engage computer forensics specialists to investigate a breach event
- Locate experts to harden security or remediate damages
- Obtain credit monitoring services for affected employees, customers or members
- Retain a public relations firm with experience in managing breach communications
